Indian Population Distribution (2022) - Summary

Total Population: 1.42 Billion

Median Age: 28 Years

Key Observations:

- The largest age group is 15-19 years (9.1%), indicating a strong young population base.
- The workforce-dominant groups (20-44 years) collectively make up a significant portion (~31.7%), reflecting economic productivity.
- The elderly population (60+) is relatively small (~8.7%), suggesting a younger demographic structure.
- There is a gradual decline in population percentage from age 45+, highlighting demographic shifts that could impact

healthcare and retirement planning in the coming decades.

- The 0-4 age group (6.8%) is slightly lower than previous generations, hinting at potential changes in birth rates.

Possible Implications:

- **Economic Growth & Workforce:** The strong representation of younger and middle-aged groups suggests a large workforce available for industries, innovation, and entrepreneurship.

- **Healthcare & Aging Population:** The lower percentage of elderly individuals indicates lesser dependency burdens but could shift in the future with increased life expectancy.

- **Policy Considerations:** Educational and employment strategies should focus on the 15–29 age group to maximize development potential.
